National Center for Safe Routes to School

The National Center for Safe Routes to School has developed a toolkit designed to assist you in initiating and implementing a SR2S program. Customizing your program to the needs of your community will ensure the success of your program and your chance of success will increase if you follow in the footsteps of the pilot programs outlined in this document.

<http://www.saferoutesinfo.org/program-tools/safe-routes-school-toolkit>

The National Center for Safe Routes to School offers numerous evaluation tools designed to assist safe routes to school programs including travel tallies, surveys, and school assessments to help you understand walking and bicycling safety issues at your school.

Institute for Local Government

The Institute for Local Government's *Creating Safe Walking and Bicycling Communities: Safe Routes to School Decision Maker's Toolkit* was developed to support local school, city, and county officials and their executive staff who want to promote pedestrian and bicycle safety for students traveling to and from school, as well as expanding active transportation choices for all residents through Safe Routes to School and other programs.

Safe Routes to School Resources

ChangeLab Solutions

The ChangeLab Solutions website offers numerous reports, factsheets, and webinars. Also available is the *Safe Routes to School District Policy Workbook*, designed to help school board members, administrators, families, and community members create and implement policies that support active transportation and Safe Routes to School programs. The workbook will walk you through a series of policy options to help you build your own customized Safe Routes to School policy, which you can download and use in your community.

Transportation Injury Mapping System

The Transportation Injury Mapping System (TIMS) was established by researchers at the Safe Transportation Research and Education Center (SafeTREC) at the University of California, Berkeley to provide data and mapping analysis tools and information for traffic safety related research, policy and planning.
